Facebook live stream multiple groups

Facebook Gaming is shooting for Twitch and YouTube Gaming. The fight to be the number one streaming platform continues to intensify, and while Amazon's Twitch is still the service to beat, Facebook Gaming has greatly increased its chances of success by capitalizing on Microsoft's Mixer shutdown. However, even without its partnership with Mixer, the social media giant has invested heavily in its live streaming service and has seen significant growth. More people than ever are trying to stream their favorite games for the first time, and with the huge Facebook audience, it has all the tools to rank up. There's never been a better time to jump on the wagon live streaming, then. And luckily for you, we'll show you exactly how to live stream on Facebook Gaming with our comprehensive guide. From creating a game page, to choosing the right bitrate settings, you won't have to look anywhere else for all the key information you need. Let's get started, shall we? How to stream on TwitchHow to stream on YouTubeBest cheap webcam1. Create a game page (Image Credit: Facebook)There's a good chance you already have a Facebook account (the social media platform has 2.6 billion monthly users after all), but it's important to create a dedicated gaming page so you can reach the right audience. First, go to Create a game video creation page and choose a name for your page. Don't change the Category, as this is what gives you access to your Facebook Gaming audience and algorithms. After calling the page, press on. You can now make the usual changes you expect from a Facebook page, including updating your profile and cover photo, adding a description, and updating any other details you'd like to edit.2. Download your broadcast software (Image Credit: Streamlabs OBS)If you plan to stream your gameplay on Facebook, you will need to download one of the many free streaming software programs available, such as Streamlabs OBS, OBS Studio or Xsplit. There isn't a right or wrong option here: just choose the software you like the most, as they all work the same way. For this example, we will use Streamlabs OBS to broadcast live on Facebook Gaming. First of all, download and install the software from the Streamlabs website and let the program analyze internet speed and computer hardware to configure the best performance settings for you. Alternatively, you can manually configure the settings by clicking 'Settings' in the lower left corner, then clicking 'Output' and choosing the encoder. The two choices you should consider are NVENC or NVENC New (if you have a graphics card GeForce) or x264, which is based on your CPU. You then need to determine the best bitrate for Facebook Gaming. The rule of thumb is to determine the loading speed and subtract 20% to give you your total. However, Facebook strongly recommends using a 4000 Kbps bitrate, which should be suitable for most up is the keyframe range. Set it to 2 for optimal quality, and in the Video side panel choose an output value of 720p (1280 x 720) at 30 fps. Facebook allows higher quality streams, but you have to be part of Facebook's Level Up creator program to access 1080p (1920 x 1080) at 60fps.3. Set up your stream (Image credit: Streamlabs OBS)If you want to make your stream more attractive to viewers, you'll need to add some items like a webcam, a voice-over page, and an overlay if you have one. Start by creating a new scene by clicking the sign closest to the lower left corner. Name the scene, click Finish, and you're ready to get started. To bring your streaming to life, we'll let you add some sources. Click the plus sign at the bottom of the center called Sources and add the game movie using Game Capture, Window Capture, or View Capture. Although it's totally up to you, we recommend using Game Capture, as this is the least intensive hardware of the three options. Once your gameplay is shown, it's time to add your webcam to the scene. Again, click the plus sign in the Sources menu and click Video Capture Device, select the webcam and voila: you should see yourself on the screen. You can reposition your webcam wherever you want, so find a place that works for you and doesn't hinder too much information. Finally, we ensure that you can be heard by your audience. Adding a microphone is pretty much the same process: just go to Sources > Audio Capture Input and choose the microphone.4. Live (Image Credit: Facebook)From the Facebook Gaming page, which is located in the creation bar at the top of the feed, click 'Live'. This will open a new page called Live Producer. You will have to copy and paste your stream key into your broadcast software from here. Just go to Settings > Stream and paste the code where you say Stream Key. Once you do this, go to the menu on the left side and create a title for your video. Your title should be interesting for all viewers who might come across your stream, and you'll need to tag the game you're playing as well. You don't have to, of course, but expect a lot less views if you don't. You can also add a video preview image and create some surveys and questions that your viewers can interact with. After it's all sorted, it's time to hit Go Live in your streaming software, which will record a preview of your stream and also check the status of your stream. When you're happy with what it all looks like, press Go Live on the Live Producer page. You will then be redirected to the Creator Studio page after a couple of seconds. 5. Monitoring your stream (Image credit: Creator Studio is full of vital information like your total viewers, streaming information, streaming health, and the latest comments you may have received. It's a great way to get an overview of everything that's happening when you're live, so you'll love keeping it open open the transmission. At the end of your stream, Creator Studio provides a detailed breakdown of all the analytical data you might hope for, which should help you improve your streams in the future. And that's all there is to it. We hope that our way of streaming on Facebook Gaming guide has given you all the tips and tricks you need to broadcast to the world. If you want to improve your streaming and experience for your viewers, don't forget to check out the best webcams and USB microphones available. Stay in touch: How to use Facebook Messenger Facebook will hold a press conference at its Palo Alto headquarters tonight, and the company is said to be preparing to announce a new location-based service for its extremely popular social networking site. If the entries are correct, Facebook would join a growing wave of web service companies that place positions on content posted by users. Other sites like Gowalla and Foursquare have built entire companies on the concept, but Facebook could put those small specialized players out of business if it offers a similar service for its huge base of 500 million members. With the announcement of new location-based features, Facebook could also reignite the privacy turmoil that has plagued the company in recent months. With location-based functionality in place, Facebook would be able to make public not only what you write in your profile, but also where you were when you wrote it. Here's a live video feed, provided by Facebook, of the press conference at the company's headquarters in Palo Alto, California. Watch on Facebook Live to chat with other viewers Note: When you buy something after clicking on links in our articles, we may earn a small commission. Read our affiliate link policy for more details. Facebook is flipping the live switch on its home page, sending your stream of friends updates on the move for the first time. Talk about real-time streaming began when the new design was first launched, but until now the live update feature had still been implemented. Facebook Live Streaming The live and real-time stream means you won't have to press the update to see your latest updates and activities – rather, the page will act as a user-controlled scrolling selection perimeter, constantly alerting you as new information evolves. The service follows a real-time option implemented on social sharing site FriendFeed just last week. There, the change has divided users, with many complaining that the constantly refreshing feed creates a sense of information overload. Unlike the friendfeed, where real-time updates automatically scroll unless you press a pause button, facebook's new system will present an option to view incoming updates as they arrive via a top-of-page prompt. You'll need to click that notification to see the new updates, something that could help reduce motion sickness. Facebook Feedback Facebook editing is the direct result of user feedback: users: redesign sparked a kind of revolt, with millions calling for boycotts to protest the retooled aspect. Adding the live update, site representatives say, was one of the most common requests they received during that time period. Therefore, Facebook agreed to change the design accordingly. Facebook's live update feature will be implemented gradually, so it may not appear immediately on all accounts, but it will be available to everyone in the near future.
